

Pure **design** that works

SoundStyle®

*These are no ordinary speakers  
and there's nothing ordinary  
about the way they sound,  
either.*

They say that what you choose to surround yourself with says a lot about you.

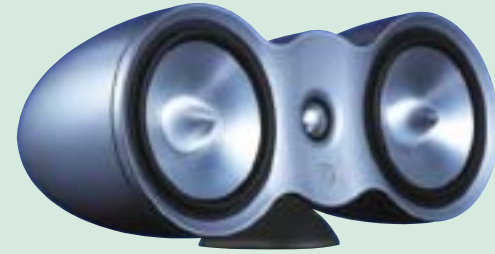

These speakers reveal that you don't want to conform to the norm, that you know great design when you see it, and that you care a lot about sound. In fact, they portray your personality.

The new SoundStyle® Series is the result of what happens when talented young designers and some of the best acoustic engineers in the business are given the freedom to come up with a new generation of speakers for a world of exciting new digital formats. Gone are the days when the only way to enjoy quality sound was to dominate the room with big unwanted furniture style boxes. Not that we've got anything against traditional speakers - as one of the most respected innovators in the business, we've made many award winners ourselves over the past 78 years.

Our designers have created a genuine original that challenges convention, an exception that shines out amongst all the conventional systems. It happens in every field every once in a while. Cars. Computers. Clothes - even vacuum cleaners. Objects whose design signature is so strong that they couldn't possibly be made by anyone else. SoundStyle encapsulates all of this to offer you a genuine alternative.

Looking good is important, but that is just part of the story.

*Pure design that works.*

Celestion has always prided itself on pushing the boundaries of design and engineering. The use of leading edge materials has always been a prime reason for our success. The organic form of the cabinets were developed

not only for reasons of rigidity but also to eliminate internal standing waves. They are engineered from die cast aluminium because of its density, acoustic qualities and its ability to be machined to minute tolerances. Looking 'drop-dead gorgeous' is just a welcome bonus.

## AVP is a range not just a product

If you want to really experience home cinema then the SoundStyle® range will heighten the intensity and passion of any movie or CD track. Designed with modern media and modern consumers in mind, SoundStyle offers a number of solutions. Three products make up the range that provides the choices. These solutions are innovatively attractive and all equally capable of the sound reproduction expected from Celestion.

AVP305 - Small, discreet, yet superbly powerful. They use the same high quality materials as the entire range. Uniquely cast in aluminium, with an aluminium tweeter and aluminium coated bass / midrange driver, these are speakers that demand attention. The AVP305s are for those who want performance without losing living room space. The satellites are capable of being either freestanding, wall mounted or placed on stylish stands that incorporate cable management to hide unsightly wires. The centre channel is perfectly matched both visually and sonically to give the clearest vocal and front surround effects, and the 200W subwoofer adds the explosive quality to produce the dramatic surround sound reproduction recorded on modern media. The AVP305 is the definitive Celestion Home Cinema system.

AVF302 - Using a 12mm thick, shaped Italian tinted glass or beechwood stand to house a die cast aluminium cabinet, the 302s stand alone in design. The cabinet holds the tweeter and bass midrange drivers, again in aluminium. The AVF302s are a stunning development on the continuing theme of the AVP range. Cable management eliminates unsightly wires and keeps the design as clean and stylish as intended. At home as a pair of hi-fi loudspeakers, 302s give dramatic two channel stereo reproduction. Combined with other models in the range, like the 303s or 305s, they can turn your lounge into a style led home cinema.

AVP303 - Designed to partner the AVF302, the AVP303 adds the additional units needed to produce 5.1 surround effects. If you own a pair of floorstanding 302 speakers and you are ready to progress to home cinema, the 303 is for you. If you have simply decided the glass or beechwood floorstanders are your front speakers of choice, and you would like matching satellite style surround speakers, this is the product for you. Supplied as two rear surround satellites, a centre channel and a subwoofer from the AVP305 system, the 303 adds flexibility and choice. Both tonally and style matched the AVP303 system takes the headache out of matching a 5.1 system, and gives you the choice of listening experiences.

Flexibility is the key. Configurations to suit all your needs. Stereo, 5.1 or 7.1, the choice is yours.

*We have worked hard to make sure that great looks are accompanied by great sound.*

The SoundStyle® range, from the very beginning, has always been about flexibility. It was designed to fit into the home and not for the home to fit around it. Although the

AVF302s were designed as an alternative to traditional hi-fi speakers, they are equally at home as part of a home theatre system. Either paired with the AVP305 5.1 home cinema package to present stunning 7.1 surround sound, or with the equally flexible AVP303 to present more traditional 5.1 surround sound effects.

When settling down on your sofa, the experience and the emotion are the only things that count. And because we have been stirring people's senses for over 70 years, you can now experience it too.

# Information

## Specifications

Design	2 Way closed box floorstanding speaker
Tweeter	25mm (1"), aluminium dome
Bass/Midrange	130mm (5.25"), aluminium coated PP-cone
Frequency response (±2 dB)	50 Hz - 22 kHz
Crossover frequency	2.5 kHz
Amplifier requirements	10 - 100W
Sensitivity	90dB for every 2.83v input
Impedance	8 Ohms
Magnetic shielding	Yes
Weight	Glass - 11kg (24.2lbs) Beech - 12.3kg (27lbs)
Dimensions (HxWxD)	890 x 185 x 480mm, 35 x 7.3 x 18.9"
Cabinet finishes	Tinted glass or Beech

AVF302

## Specifications

Design	Bass Reflex
Tweeter	N/A
Bass/Midrange	210mm (8") coated pulp cone
Frequency response (±2 dB)	25 Hz - 130 Hz
Crossover frequency	Low pass variable 40 Hz - 140 kHz
Amplifier requirements	200W built-in
Sensitivity	100mV for full output
Impedance	N/A
Magnetic shielding	Yes
Weight	14.5kg (31.9lbs)
Dimensions (HxWxD)	370 x 320 x 320mm, 14.6 x 12.6 x 12.6"
Cabinet finishes	Metallic Charcoal

S10

AVS301

AVC301

Design	2 way closed box satellite speaker
Tweeter	19mm (0.75") aluminium dome
Bass/Midrange	100mm (4") aluminium coated PP-cone
Frequency response (±2 dB)	90 Hz - 22 kHz
Crossover frequency	3 kHz
Amplifier requirements	20 - 80W
Sensitivity	88dB for every 2.83v input
Impedance	8 Ohms
Magnetic shielding	Yes
Weight	1.9kg (4.2lbs)
Dimensions (HxWxD)	210 x 120 x 150mm, 8.3 x 4.7 x 5.9"
Cabinet finishes	Silver

Design	ABR system 2 way
Tweeter	19mm (0.75") aluminium dome
Bass/Midrange	2 x 100mm (4") aluminium coated PP-cone
Frequency response (±2 dB)	60 Hz - 22 kHz
Crossover frequency	3 kHz
Amplifier requirements	20 - 80W
Sensitivity	88dB for every 2.83v input
Impedance	8 Ohms
Magnetic shielding	Yes
Weight	1.7kg (3.85lbs)
Dimensions (HxWxD)	128 x 287 x 150mm, 5.04 x 11.3 x 5.9"
Cabinet finishes	Silver
